

NOTICE:

Prescription of pain medication, diet aids, attention deficit meds and sedatives should be taken with great care due to their inherent dangers. They are regulated by both the state and the federal government. They have significant risk for abuse and dependence. Possible addiction can result. Diversion has been reported in as high as 20% of the population for pain medications and can be illegally sold for profit and used for recreation. They can also lead to overdose and death.

In order to provide you with the best possible care and to best serve our community our providers do not routinely use these medications in their practice.

If you are expecting to receive prescriptions from them for any of the medications listed below please be prepared to choose an alternative.
